

Kora

Tunisian football games, in Derja

A hub of games copied from the sites that work (NBA 82-0, playfootball.games, Immaculate Footy), built on Tunisian players: one daily puzzle, one endless streak, one viral season simulator at launch, then five more. Derja first, French second. Free to run, measured, with an AI layer that costs nothing.

Next.js 16

Neon

Upstash Redis

PartyKit

SSE

Wikidata

Gemini free tier

PostHog

Student Pack domain

Ten decisions are marked in red on page 14. Everything else is my recommendation, ready to build.

Football is the sport, Facebook is the square, and nobody built the games in Derja

9.1M

Tunisians on Facebook, 72% of the population

2.3M

followers of Espérance's page alone

53%

of Tunisian Facebook comments are in Arabizi, 34% Arabic script, 13% mixed

0

Tunisian football game sites; none in Derja

What spreads

Same puzzle for everyone, once a day, with a result you paste. And one simulator: 82-0's creators say the squad builder, not the puzzles, is what went viral in 2026 (ESPN, SI and Yahoo covered it; NBA players played it).

What we don't compete with

Tunisian Football Fantasy exists and is heavier. Free football APIs don't cover Ligue 1 Tunisie; Wikidata covers Tunisian players (1,090; 310 with Arabic names; 285 photos).

Four sites, one pattern

SITE	SHAPE	GAMES	WE COPY
NBA 82-0 viral 2026	dark hub: hero, "Today's puzzles" strip, mode cards with badges (Daily, Endless, Quiz, Timed, Predict), "Today's top sides", Hall of Fame on device	82-0 squad builder + season sim · Hoople · Guess the Player · Draft Class · Higher or Lower · Career Path · Beat the Clock · Score Predictor · Bracket	the hub, the badges, the simulator as centre, daily strip, device-saved boards
playfootball.games	hub with league pickers, daily and multiplayer sections	Who Are Ya? · Box2Box · Missing XI · Career Path · Football Wordle · Tiki-Taka-Toe (2 players) · Bingo · Connections	Who Are Ya? tiles, Missing XI, the multiplayer duel
Immaculate Footy (FBref)	one game, perfectly	3×3 grid of clubs × criteria, nine guesses, rarity score	the grid and the rarity score
KitTok · Transfer Quiz · higherorlower	single games	reveal the kit · guess from transfers · market value higher/lower	endless higher/lower, later kit reveal

Free, no login

Anonymous play, device-saved streaks, optional account.

Dark, one accent

Every one of them. Ours: pitch green and shirt red.

Share grid + archive

Emoji result; yesterday's puzzles playable.

Ads

They run them. We don't: Vercel Hobby terms, and the portfolio reads better.

Laid out like 82-0, filled with Tunisia

Pronostique le derby et les matchs des Aigles.

Predict · live

DUEL
Tiki-Taka-Toe à deux, en temps réel, par lien.

Multiplayer

Mockup in French; the default language is a decision (D2). Mode badges, the daily strip and "classement du jour" are lifted straight from 82-0.

kora · plan v2

4 / 16

Eight games, three at launch

#	GAME · DERJA NAME	TYPE	MECHANIC (COPIED FROM)	PHASE
1	Chkoun? · شكون؟ · C'est qui ?	Daily	Mystery Tunisian player, 8 guesses, 6 clue tiles (Who Are Ya?, Hoople)	Launch
2	30-0 · ٣٠-٠	Simulator	Spin a club and era, draft a legend per position, simulate a 30-match season, share the squad (82-0)	Launch
3	Aktar wala A9all · أكثر ولا أقل	Endless	More caps, goals, trophies? Keep the streak (Higher or Lower)	Launch
4	Masira · المسيرة	Daily	Clubs revealed one by one; fewer = more points (Career Path)	2
5	Box 3×3 · الشبكة	Daily	Clubs × trophies × eras, nine guesses, rarity score (Immaculate Footy, Box2Box)	2
6	El 11 · الحداش	Daily	A famous Tunisia or derby line-up; name the eleven (Missing XI)	3
7	Tbannen · تبّـن	Predict · live	Score predictions for derbies and the Eagles; live points (Score Predictor)	3
8	Duel · ديول	Multiplayer	Two players, 3×3 of clubs and criteria, turns in real time (Tiki-Taka-Toe)	3

30-0 ratings are computed from caps, goals, honours and era and shown with their inputs on every card, so the arguments happen in the comments and not with us.

(hint A1) لعب نهائي الدوري في 2019

Kora 12 3/8 · 41# شكون؟

Chkoun? Six clues, eight guesses, rolls at midnight by itself

TILE	GREEN	AMBER
Club	same club	club in the same country
Country of club	same	same confederation
Position	same	same line (DEF / MID / ATT)
Age	same	within 2 years, with ↑ ↓
Caps	same band	adjacent band, with ↑ ↓
Governorate of birth	same	same region (north, centre, south)

Pool: about 300 curated players (internationals since 2000, Ligue 1 squads, Tunisians abroad). Search accepts Arabic, Arabizi and French spellings ("mejbri", "مجبري", "hanibal" all work). After guess 4, an AI hint in Derja. After the game: player card, share grid, streak, countdown; at 00:00 Africa/Tunis the page rolls to the new puzzle without a refresh.

30–0: draft legends into a Ligue 1 club and chase a perfect season

1 · Spin

A club (Espérance, Club Africain, Étoile, CSS, Stade Tunisien, ...) and an era (80s, 90s, 2000s, 2010s, now). Both random, both re-spinnable once.

2 · Draft

Eleven positions; for each, three legends from that club's history across eras, with computed ratings 60–99 and the inputs shown (caps, goals, honours, era).

3 · Simulate and share

Thirty matches against the league, seeded and reproducible. The record and the squad card go to "Today's top sides" and to Facebook as an image.

Why it spreads

Every Tunisian fan has an opinion on the all-time Espérance XI. The card invites the argument; the argument brings the next player. 82–0 went viral on exactly this.

Engineering inside

A documented rating formula, a deterministic season engine with property tests (same seed, same season; a 99-rated XI wins more than a 70 one, always), an edge-generated share image, a live board over SSE.

Derja first, in both scripts people actually type

شكون اللاعبين؟

Derja, Arabic script

How fan pages post. 34% of comments.

Chkoun el la3eb?

Derja, Arabizi

How people type on phones. 53% of comments. Recognised by Ethnologue as Tunisia's informal script.

C'est qui ?

French

Second language of the web in Tunisia; the diaspora.

Rules

No Modern Standard Arabic in the UI. Copy written in Derja by you, reviewed by one more Tunisian before launch; no machine translation. Western digits everywhere. Player names in the chosen script with the Latin spelling underneath.

Search that understands Derja

A transliteration table (3→ق→9, ح→7, ع, kh/5→خ) plus fuzzy matching, tested against 200 real misspellings collected from fan pages. Not an LLM: fast, free, predictable.

Sources: study of 1.2M Tunisian social-media comments (arXiv 2020); Ethnologue 2016.

Four features, zero cost, each with a fallback

	FEATURE	HOW	COST CEILING
A1	Hint of the day after guess 4, one hint in Derja generated from the player's Wikipedia text	generated nightly by the data job (Gemini free tier), stored, editable in the review queue	one call a day
A2	Coach's report two lines in Derja about your guesses, to paste with the share grid	at request time, cached by (puzzle, guess pattern); Gemini free tier, 1,500 requests/day; template when the quota is hit	free to ~1,000 games/day, then templates D9
A3	Name understanding Arabizi, Arabic and French spellings all find the player	transliteration + fuzzy matching, no model	none
A4	Review assistant turns "he moved to Al-Ahli in July" reports into proposed data fixes	nightly batch, Gemini free tier; nothing changes without your click	a few calls a day

Why not a chatbot

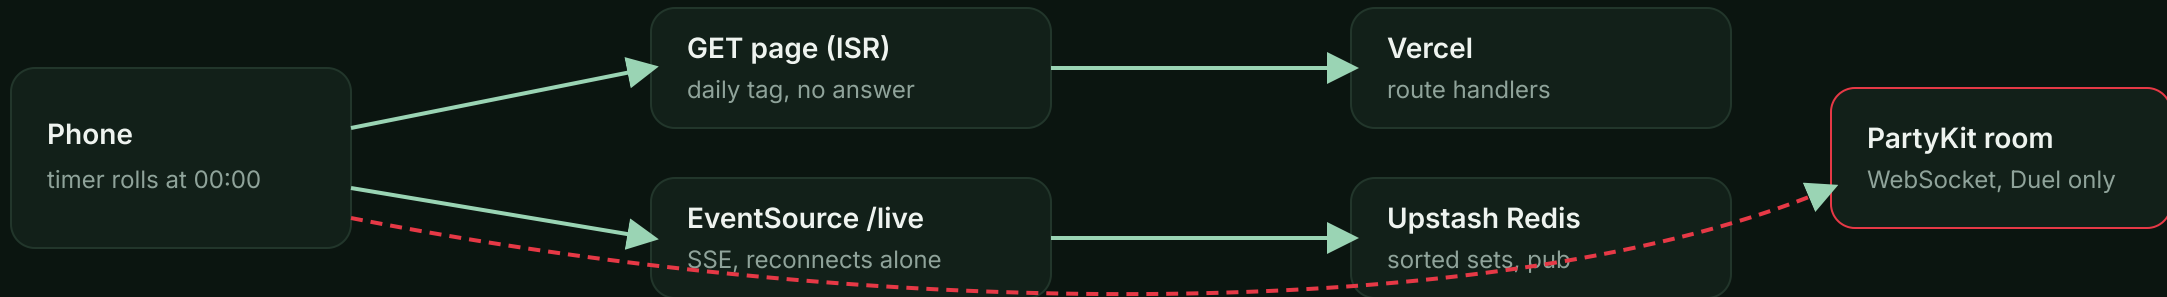

It would cost money at any real traffic and add nothing to the share loop. These four are bounded, cached, measurable (hint opens, report shares) and fail to templates.

Free tiers, verified

Gemini Flash: free, about 1,500 requests/day. Groq: 1,000/day. Cloudflare Workers AI: 10,000 neurons/day, second provider if Gemini's quota is hit.

Nothing refreshes; three transports, each chosen for a reason

NEED	TECHNOLOGY	WHY
Daily puzzle rolls at midnight with no refresh	Timer + ISR : client timer against the server clock, then <code>router.refresh()</code> ; page cached with a daily tag	no connection needed; zero cost
"Today's top sides", streak boards, live points in Tbannen	Server-Sent Events from a Next.js route handler reading Upstash Redis every few seconds	one-way; browsers reconnect by themselves; works on Vercel; free
Duel: two players, turns, presence	WebSockets on PartyKit (Cloudflare Durable Objects): one object per room, state in memory	Vercel cannot hold WebSockets; rooms are what Durable Objects are; free for non-commercial use
Fallback	Abyl free (200 connections, 6M messages/month) or Supabase Realtime (200 connections)	if PartyKit's terms change

Free, legal, reviewed: Wikidata, your corrections, the audience, and an AI that only proposes

Curated line-ups for El 11 and fixtures for Tbannen are hand-entered files in the same repo.

FIELD	COVERAGE ON WIKIDATA
Names ar / fr / en	310 / 357 / 366 of current-era players
Clubs with dates, position, birth date and place	yes; the current season lags
Caps, honours	caps yes; honours partly, overrides fill the rest
Photos	285 on Commons; only CC BY / BY-SA, credited

Every change to the pool is a pull request: versioned, reviewed, with provenance per field. Ratings for 30–0 come from a documented formula (caps, goals per match, honours, era, position) scaled 60–99 and shown with their inputs.

Static pages, server-side game engines, three transports, zero cost

LAYER	CHOICE	WHY
App	Next.js 16, TypeScript, Tailwind 4, next-intl (ar-TN script, ar-TN Latin, fr), PWA	the family stack; three locales with RTL and LTR is new and visible
Engines	pure TypeScript modules: chkoun, season, higher-lower, grid; fast-check property tests	no I/O, reproducible from a seed, answers never leave the server
Data	Neon Postgres + Prisma; nightly GitHub Actions job	pool, schedule, results, reports, accounts; data reviewed by PR
Live	Upstash Redis + SSE; PartyKit on Cloudflare for Duel	page 10
AI	Gemini free tier (A1, A2, A4); Cloudflare Workers AI as second provider	page 9
Identity, analytics, errors	Auth.js (Google, optional) · PostHog cookieless · Sentry (Student Pack)	streak sync; funnels and retention; errors
Domain, CI	Student Pack free domain · GitHub Actions: lint, typecheck, unit, Postgres, Playwright, Lighthouse budget	habits from Payout Ledger and tnpay

Student Pack used

Free domain (Name.com .app/.dev/.live or Namecheap .me), Sentry for a year, Copilot. Azure, Heroku, MongoDB credits not needed.

Hosting

Vercel Hobby, fra1, cron for the daily roll and the nightly job. No ads, no prizes (Hobby terms).

Costs

Zero. Vercel, Neon, Upstash, PartyKit, PostHog, Gemini free tiers.

Seven places the engineering shows

1 · Data pipeline with provenance

Nightly SPARQL, overrides, audience reports, an AI that proposes and a human that approves, every change a PR.

2 · Deterministic engines

Seeded season simulator, time-zone-correct schedule, grid rarity computed from everyone's answers; property-tested.

3 · Three transports by need

ISR + timer, SSE on Redis, WebSockets in Durable Objects, with the written reasons.

4 · A dialect in two scripts

RTL and LTR in one layout, transliteration-aware search, no machine translation.

5 · AI with a ceiling

Cached, quota-aware, template fallbacks, measured by its own events.

6 · Fast on a 3G Android

Lighthouse budget in CI, edge share images, PWA offline for today's puzzles.

7 · Abuse without accounts

Anonymous ids, per-id and per-IP limits, answers that never leave the server, one result per player per game per day (the idempotency habit from Payout Ledger), and a public write-up if the game is ever cheated.

Ten choices; my recommendation in each

D1

Name and domain

Kora family (kora.me, koratounsia.app), Dawri, or yours. **Rec:** short, Derja-sounding, not a club's; claim the free domain.

D2

Default language

Derja Arabic script / Derja Arabizi / French. **Rec:** Arabic script; the other two one tap away.

D3

Accounts

Anonymous only, or + optional Google. **Rec:** optional Google in phase 3.

D4

Pool scope

Tunisians only, or + foreigners in Ligue 1. **Rec:** Tunisians at launch; foreigners when 30-0 needs full squads.

D5

Photos

Licensed Commons photos with credit, or silhouettes. **Rec:** photos, silhouettes as fallback.

D6

Analytics

PostHog cookieless / Umami / Vercel Analytics. **Rec:** PostHog.

D7

Launch channel

Fan groups / a page for the game / both. **Rec:** both.

D8

Launch set

Chkoun? + 30-0 + Aktar wala A9all / Chkoun? only / all dailies. **Rec:** the three.

D9

AI at runtime

Coach's report on (quota, then templates) / only nightly AI. **Rec:** on, with the ceiling.

D10

Duel transport

PartyKit on Cloudflare / Ably / skip Duel. **Rec:** PartyKit, phase 3.

Reply with one line per decision, or "all as recommended, D1 = ...".

Launch in eight working days, eight games in four weeks

DAYS 1–3

Foundation

Repo, CI, data pipeline with ratings and first pool, engines for Chkoun?, season and higher-or-lower with property tests.

DAYS 4–8

Launch

Hub, the three games in three languages, share grid and squad card, SSE board, PWA, PostHog, Sentry, domain, A1 hints, A3 search. **Live.**

DAYS 9–14

Keep

Leaderboards, optional sign-in, Masira, Box 3×3, A2 coach's report, A4 review assistant, report button, first nightly data PR.

WEEKS 3–4

Grow

El 11, Tbannen for a national-team match, Duel on PartyKit, archive, retention work from the numbers, portfolio case study with real figures.

Targets, month one

500 daily players · 25% share rate · 30% D7 retention · 20% of visitors try 30–0.

Risks

Stale clubs → overrides and reports. Gemini quota → templates, then Workers AI. PartyKit terms → Ably. Nobody shares → measure from day one.

Privacy

No personal data without sign-in. Cookieless analytics, no banner. Everything deletable on request.

NEXT

What happens after you answer

You

Answer D1–D10 (one line each). Claim the domain in the Student Pack. Write or review the Derja copy when I send the file (about 80 strings). Name the fan groups you're in.

Me, same day

Implementation plan, repo, CI, the data pipeline, the first real pool with ratings, the three engines with tests.

Me, by day 8

The hub live on the free domain with Chkoun?, 30–0 and Aktar wala A9all in three languages, measured, with your launch post ready.
