

Kora

daily Tunisian football games

One mystery Tunisian player a day. Six clues per guess, eight guesses, a result you paste into Facebook. Arabic and French. Free to run, built to be measured.

Next.js 16

Neon

Upstash Redis

Wikidata

PostHog

Vercel

Student Pack domain

Eight decisions are marked in red. Everything else is my recommendation, ready to build.

Football is the sport, Facebook is the square, and nobody made the game

9.1M

Tunisians on Facebook, 72% of the population

2.3M

followers of Espérance's page alone

5.6M /mo

visits to LiveFPL, one fan tool for one game

0

daily Tunisian football guessing games today

The mechanic that spreads

Same puzzle for everyone, once a day, with an emoji result you paste anywhere. Wordle, Who Are Ya?, NBA 82-0's Hoople all grew on it. The share grid is the product.

What we don't compete with

Tunisian Football Fantasy already exists and is heavier. Transport and pharmacy apps exist. Free football APIs don't cover Ligue 1 Tunisie; Wikidata does cover Tunisian players.

Guess the player: six clues, eight guesses

TILE	GREEN	AMBER
Club	same club	club in the same country
Country of club	same	same confederation
Position	same	same line (DEF / MID / ATT)
Age	same	within 2 years, with ↑ ↓
Caps	same band	adjacent band, with ↑ ↓
Governorate of birth	same	same region (north, centre, south)

Pool at launch: about 300 curated players: internationals since 2000, current Ligue 1 squads, Tunisians abroad. Autocomplete accepts Arabic, French and English spellings. After the puzzle: the player card, the share grid, the streak, a countdown to midnight (Africa/Tunis).

Later modes: Career Path (guess from the list of clubs), Higher or Lower (caps, goals). Decision D8.

The words we will use everywhere, in code and in copy

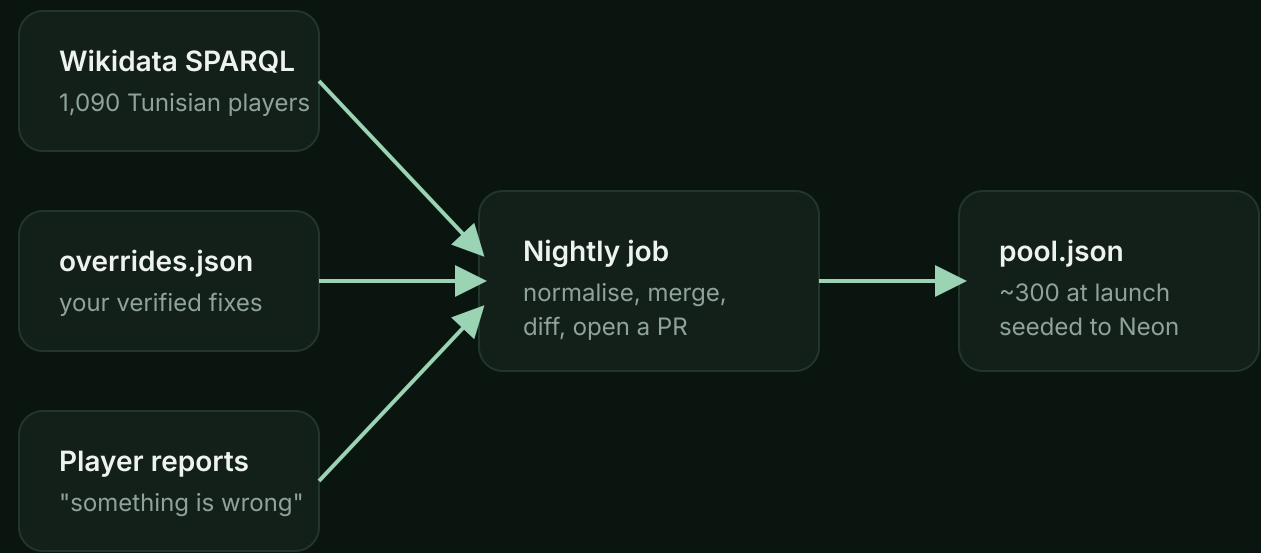

Puzzle	one day's mystery player; same for everyone; rolls at 00:00 Africa/Tunis	Streak	consecutive solved days; on the device, synced if signed in
Pool	the players a puzzle can be, and a guess can name	Share grid	the emoji result; the growth engine
Guess	one submitted name; 8 per puzzle	Season	a calendar month; leaderboards reset
Clue tiles	the six-cell row after a guess	Mode	a game type; one at launch

In Arabic and French

اللاعب · المحاولة · السلسلة · شارك النتيجة

le joueur · l'essai · la série · partager le résultat. Copy lives in one file per language; a native speaker reviews the Arabic before launch.

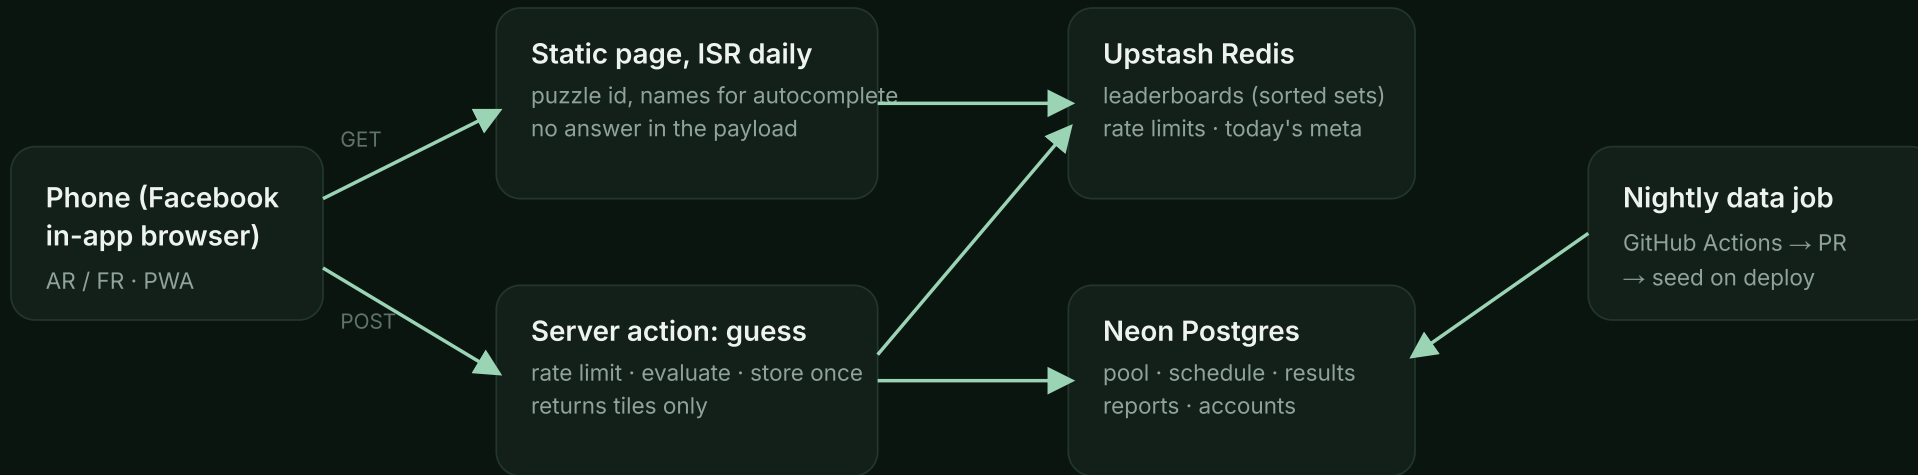

Free, legal, reviewed: Wikidata plus your corrections plus the audience

FIELD	FROM WIKIDATA
Names ar / fr / en	310 / 357 / 366 of current-era players
Clubs with dates, position, birth date and place	yes; clubs lag the current season
Caps	yes, for internationals
Photos	285 on Commons; only CC BY / BY-SA used, with credit

Every change to the pool is a pull request, so the data is versioned and reviewed. Each field keeps its provenance. The schedule is a seeded shuffle a year ahead with manual pins (a birthday, a derby).

Static page, server-side guesses, nothing on the client can reveal the answer

Game engine

Pure TypeScript, no I/O: evaluate, score, schedule. Property-tested.

Observability

PostHog funnels and retention, Sentry errors, Lighthouse budget in CI.

Hosting

Vercel Hobby, fra1, cron for the daily roll. Zero cost; no ads, no prizes.

Same family as the other two projects, two new pieces that matter

LAYER	CHOICE	WHY	COST
App	Next.js 16, TypeScript, Tailwind 4, next-intl (AR/FR, RTL)	known stack; i18n with RTL is new and visible	0
Data	Neon Postgres + Prisma	pool, schedule, results, reports	0 (free tier)
Speed and fairness	Upstash Redis (Vercel marketplace)	sorted-set leaderboards, rate limits, daily meta cache	0 (free tier)
Auth (D3)	Auth.js, Google	optional; streak sync and a name on the board	0
Analytics	PostHog Cloud, cookieless	funnels, retention, no banner	0 to 1M events
Errors	Sentry	Student Pack: 50k errors, 1 year	0
Domain	Name.com (.app/.dev/.live) or Namecheap .me	Student Pack, 1 year free	0
Quality	Vitest + fast-check, Postgres tests, Playwright, Lighthouse CI, GitHub Actions	the habits from Payout Ledger and tnpay	0

Seven places the engineering shows

1 · Data pipeline with provenance

Nightly SPARQL, normalisation, overrides, a diff opened as a PR, audience reports feeding a review queue.

2 · Server-authoritative engine

Pure functions, property tests, a deterministic schedule that is correct across time zones and never repeats a player within 90 days.

3 · Redis the right way

Sorted-set leaderboards, per-id and per-IP limits, one result per player per day (idempotency, again).

4 · Arabic and French in one layout

RTL, Arabic numerals and dates, two scripts for every name, a native review before launch.

5 · Performance on a 3G Android

Static page with ISR, edge share images, a Lighthouse budget enforced in CI, PWA offline for today's puzzle.

6 · Measured growth

Funnels from open to share, D1/D7 retention by language, decisions taken from the numbers and written down.

7 · Abuse without accounts

Anonymous ids, rate limits, the answer never leaves the server until the day ends; a public write-up if it is ever cheated.

How we count them, and how they arrive

EVENT	WHY
puzzle_opened	daily players
guess_made · puzzle_solved · puzzle_failed	difficulty tuning
result_shared (channel)	the growth loop
language_changed · signed_in	audience shape

500

daily players,
month 1 target

25%

share rate

30%

D7 retention

Launch plan

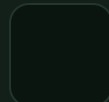

Day 0: you post the share grid of puzzle #1 in the two or three biggest fan groups and on a Facebook page for the game (D7). Derby days get a pinned puzzle and a post. The game itself never posts; people do, because the grid is theirs.

Privacy

No personal data without sign-in. Cookieless analytics, so no banner. Reports and accounts deletable on request.

Big type, one red, a dark pitch green

Palette

Pitch dark, card green, shirt red for actions, tile green and amber for results. Light mode later.

Type

Kora #41

مين اللاعب؟

Inter for Latin, IBM Plex Sans Arabic for Arabic; 17px base on phones, tiles readable at arm's length.

Motion

Tiles flip in as the result arrives; the share grid pulses once; the streak counts up. All of it off under reduced motion. Nothing moves while the player is typing.

Screens at launch

Today's puzzle · result and player card · how to play · leaderboard (phase 3) · settings (language, sign-in). That is all.

Eight choices; my recommendation in each

D1

Name and domain

"Kora" family (kora.me, koratounsia.app), "Dawri", "El La3eb", or yours. **Rec:** a short Arabic-sounding name, not a club's; check the free domain first.

D2

Default language

Arabic or French. **Rec:** Arabic default, French one tap away.

D3

Accounts

Anonymous only, or anonymous + optional Google. **Rec:** optional Google in phase 3.

D4

Pool scope

Tunisian players only, or also foreigners in Ligue 1. **Rec:** Tunisians only at launch.

D5

Photos

Licensed Commons photos with credit, or silhouettes only. **Rec:** licensed photos, silhouettes as fallback.

D6

Analytics

PostHog cookieless, Umami, or Vercel Analytics. **Rec:** PostHog.

D7

Launch channel

You in fan groups, a dedicated page, or both. **Rec:** both.

D8

Second mode

Career Path, Higher or Lower, or none yet. **Rec:** Career Path, decided from week-one data.

Twelve working days to a live, measured game

DAYS 1–3

Foundation

Repo, CI, engine with property tests, data pipeline and first pool, schedule generator.

DAYS 4–7

The game

Page in AR and FR, server-side guessing, share grid, streaks, PWA, Playwright, Lighthouse budget, PostHog, Sentry, domain. **Launch.**

DAYS 8–12

Keep them

Leaderboards on Redis, optional sign-in, OG result images, report button and review queue, first nightly data PR.

WEEK 3+

Grow

Second mode, derby pins, page content, retention work from the numbers, portfolio case study with real figures.

Risks

Stale clubs → overrides and reports. Facebook browser quirks → test in it. Nobody shares → measure share rate from day one and iterate. Photo licences → CC only, credited.

Costs

Zero. Vercel Hobby, Neon, Upstash, PostHog free tiers; Sentry and the domain from the Student Pack. No ads or prizes (Hobby terms).

NEXT

What happens after you answer

You

Answer D1–D8 (one line each is enough).
Claim the domain in the Student Pack. Tell me which fan groups you are in.

Me, same day

Write the implementation plan, scaffold the repo, build the engine and the data pipeline, show you the first real pool.

Me, by day 7

A playable game on the free domain, Arabic and French, measured, with the launch post ready for you.
